## **Design & Development of a New and Efficient Approach for Line Text Editing in Turbo Pascal 5.5 for Windows/Netware/MS-DOS\***

K. J. Satao

Professor &amp; Head, Computer Science and Engineering,

Rungta College of Engineering &amp; Technology,

Kohka Road, Kurud, Bhilai - 490 024,

Chhattisgarh, INDIA

kjsatao@rediffmail.com, kjsatao@gmail.com, kjsatao@indiatimes.com

**Abstract:** Text editors come in the forms viz. Line editors, Stream editors, Screen editors, Word processors, Structure editors, etc. There are many text editors provided with Windows viz. Notepad, WordPad, Microsoft Office Word, etc. The MS-DOS editors viz. EDLIN and EDIT also work in Windows. MS-DOS had very good word processors viz. Word Star, Word Perfect, etc. All the editors which work in MS-DOS, also work in the Novell's Netware OS as well. But none of the above editors is interactive. The process of entering the programs/text shall be greatly enhanced, for the newcomers, if the editor is an interactive one. This paper gives the design & development of a new and efficient approach for line text editing, the most basic and fundamental editing, in Turbo Pascal 5.5 for Windows/Netware/MS-DOS OS. It is proposed to give a new, interactive, and more user friendly approach to line text editing for document / non document (program) files using singly-linked lists. A menu driven program is designed and developed which works like an IDE, Integrated Development Environment, available in most of the programming languages viz. Turbo C, Turbo Pascal, etc. The program displays all the options and once a user chooses a particular option, he is prompted further interactively. The program is fully tested on Windows XP, with total RAM = 256 MB and shall work efficiently on Novell's Netware and MS-DOS as well. This research work has, in all, twenty eight options and is academically (not available in any book) very useful for the Computer Science & Engineering and Information Technology disciplines.

**Keywords:** Authoring tools and methods; Computer-mediated communication; Human-computer interface; Interactive learning environments; Programming and programming languages.

### **I. INTRODUCTION**

The options in the research work are... "C" for clearing the screen, "A" for appending lines, "L" for listing from a line number to a line number, "E" for listing the entire file, "I" for inserting lines before a line number, "D" for deleting from a line number to a line number, "U" for updating a line, "W" for writing entire text in the file opened or currently created by the user, "F" for writing specific lines in a specific file, "O" for copying from a line number to a line number before a line number, "M" for moving from a line number to a line number before a line number, "S" for searching a string, "R" for replacing a string, "G" for listing page wise(desired number of lines at a time), "V" for converting upper case to lower case and vice-versa or to title/sentence case, from a line number to a line number, "T" for copying from another file before a line number, "P" for printing a file with or without heading, "Y" for displaying directory contents, "K" for deleting files, "J" for searching archive files in a directory for a string, "H" for displaying or modifying file attributes, "B" for taking backup, "X" for moving files from one directory to the other, "Z" for renaming files, "@" for locating files in a drive, "?" for going to DOS shell, "N" for opening a new file, and "Q" for quitting. Please note that all the English alphabets are used and help had to be taken from the non alphabetic characters. With the help of the DOS shell, a user can compile his program and return to the editor for further processing or he may execute DOS commands if required.

Apart from many good features, the four most important features of this research work are...

- a. This work is compatible with text processing utilities such as EDLIN, EDIT, Notepad, etc.
- b. Insertion/appending/updation is made very easy. The program takes care of RO, H, S, D, A, Vol Id files.
- c. A user shall be able to update files even with the .bak extension. A backup file with an extension of .OLD is created before every overwriting of the file.
- d. The program works like an IDE and a user is can manipulate many file manipulation tasks.

\*Orally presented and demonstrated in the National Conference on "Information Technology, Communication and Development", organized by Rungta College of Engineering & Technology, Bhilai, C.G., India, held on 30<sup>th</sup> March 2007.

### **II. IMPORTANT EDITING PROCEDURES AND MESSAGES INCORPORATED**

[Modified, Windows/Netware/MS-DOS version of Satao, 1992 and 1994]

#### **a. Procedure USAGE**

'Interactive Line Text Editor for Windows/Netware/MS-DOS in Pascal 5, By Satao'

'Usage : NPEDITOR<Enter> from the prompt or'

' Double Click on NPEDITOR Icon or'

' Select NPEDITOR Icon and Hit Enter key'

'(Alt & Enter keys give full screen view, pressing again gives title bar)'

#### **b. Procedure GET\_DRIVE\_NAME**

'Please enter Floppy/Hard Disk/CD-ROM/Pen drive name... A/B/C/D/E/F/G/H etc. '

**c. Procedure GET\_FILE\_NAME\_MESSAGE**

'Please give file name...' '  
'You may enter just file name (8+3) for current directory'  
'Or you may enter \file name (8+3) for root directory file'  
'Or give path & file name e.g. PASCAL5\NPEDITOR.PAS'  
'78 characters maximum(case insensitive e.g. TeST.c = TEST.C)'

**d. Procedure DIS\_MEM\_CAP; {DISPLAY MEMORY CAPACITY}**

'Main memory available = ', MEMAVAIL, ' Bytes'

**e. Procedure GET\_FILE\_NAME2**

GET\_FILE\_NAME\_MESSAGE

'You may hit just Enter key for \*.\* in current directory'  
'You can use \*, ? as wild characters(? for single character). '

**f. Welcome Message**

'File:FILE\_NAME Date:DD/MM/YYYY Day:DAY  
Time:HH:MM:SS'

'-----  
'Welcome to An Interactive Line Text Editor by Prof. K. J.  
Satao,Bhilai(CG),India'

'-----  
'Please choose an option...C-Clear screen / A-Append/L-List  
specific lines / E-Entire list / I-Insert / D-Delete / U-Update /  
W-Write in open file/F-Write in any file/O-Copy / M-Move/  
G-Pagewise list / V -Convert case / T - Copy from other file/  
S-Search / R-Replace / P-Print a file / Y-Directory /K-Delete  
files / H-Change attributes / J - Search in files / B - Backup/  
X-Move files/Z-Rename files/@-Locate files / ?-DOS shell/  
N-Open new file/Q-Quit(Upper/Lower Case) '

**g. Procedure NUMBER\_CHECK**

IF (NUMBER = 0)  
WRITE 'Error in number, Value = 0, New value = 1'  
IF (NUMBER < 0)  
WRITE 'Error in number, Value is negative, New value = 1'

**h. Procedure Append\_Insert\_Update\_Message**

'Use F1 or --> to take a character from the previous line in  
the current line.'  
'Use F2 or <-- or Del to delete a character from previous line  
for current line.'  
'(F2 or <-- or Del does not physically delete a character  
from previous line).'  
'Use F3 or End to take all the remaining characters from  
the previous line.'  
'Tab key inserts 5 blank characters. Backspace key deletes  
previous character.'

**i. Insert\_Append Message**

'You can have up to 132 characters per line. End each line  
with Enter key.'  
'New line begins automatically after 132 characters are  
entered in a line.'  
'Use Ctrl d/D to end appending/inserting. You can have  
maximum 1357 lines.'  
APPEND\_INSERT\_UPDATE\_MESSAGE  
'Save(W/F) your work at regular intervals to avoid the  
accidental loss of data.'

**j. Update Message**

'You can have maximum 132 characters in the line. End  
the line with Enter key.'  
APPEND\_INSERT\_UPDATE\_MESSAGE  
'Updation automatically stops after 132 characters are  
entered in the line.'

**k. Procedure GET\_LINES**

'From which line number ? '(Say NUMBER)

'To which line number ? '(Say STOP)

**l. Delete Message**

'Please note...this option will delete the desired lines.'  
'The deleted lines cannot be recovered later on unless the  
lines are written in a file before proceeding.'  
'Do you surely want to delete line(s) ? (Y/y for yes) '

**m. Convert Case Message**

'Please enter...L/l for lower case or U/u for upper case or T/t  
for title case or'  
'S/s for sentence case or Hit Enter key to abort '

**n. Procedure SEARCH\_OPTIONS**

'Do you want to ignore case ? (Y/y for yes) '  
'? can be used as a wild character e.g. s???o shall match with  
satao, spqro, etc.'  
'Be careful in using it...Use it ? (Y/y for yes) '  
'Which string ? (First 20 characters are considered...Hit just  
Enter to abort)'

**o. Replace Message**

SEARCH\_OPTIONS

'By which string ? (First 20 characters are considered)'  
'Replace by query ? (Y/y for yes) '

**p. Procedure PRINT\_FILE**

'Printing a file on parallel printer i.e. LPT1/PRN'  
GET\_FILE\_NAME1  
'Please save your work before proceeding...Runtime error  
may occur...'  
'Choose...1..To print or 2..To abort '(Say I)  
'Choose...1..For 80 column printer or 2..For 132 column  
printer '(Say J)  
'Do you want page heading ? (Y/y for yes) '(Say CH1)

**q. Procedure NEW\_FILE**

'Please note...this option will delete all current lines.'  
'The deleted lines cannot be recovered later on.'  
'You should proceed only after writing the current lines in a  
file.'  
'Do you surely want to proceed ? (Y/y for yes) '

### III. RESULTS & DISCUSSION

In Computer Science, a Linked List is one of the fundamental Data Structures. It consists of a sequence of Nodes, each containing arbitrary Data Fields and one or two References ("Links") pointing to the Next and/or Previous Nodes. The principal benefit of a Linked List over a conventional Array is that the order of the Linked items may be different from the order that the data items are stored in memory, allowing the list of items to be traversed in a different order.

A linked list is a self-referential data type because it contains a pointer or link to another datum of the same type. Linked lists permit insertion and removal of nodes at any point in the list, but do not allow random access. Several different types of linked list exist: singly-linked lists, doubly-linked lists, and circularly-linked lists. Linked lists can be implemented in most languages. Languages such as Lisp have the data structure built in, along with operations to access the linked list. Procedural or object-oriented languages such as Pascal, C, C++, and Java also permit us to create linked lists and operate on them.

In this paper I have used singly-linked lists to develop a new, interactive, and more user friendly approach to line text editing for document / non document(program) files. A Menu driven program is designed and developed. The program displays all the options and once a user chooses a particular option, he is prompted further interactively. The work is an innovative one. The program works like an IDE, Integrated Development Environment, available in some of the programming languages viz. Turbo C, Turbo Pascal, etc. but the new feature is interactiveness.

#### IV. PROPOSED FURTHER RESEARCH WORK

It is proposed to use doubly-linked lists, circular-linked lists and develop interactive line text editors and screen editors. It is proposed to remove the present limitations of the program viz. Windows uses up to 256 characters file name whereas the current program uses 8+3 format, Windows mostly uses USB printer whereas the program uses parallel printer.

#### V. CONCLUSION

Even today, some big companies are involved in the development of IDEs(Integrated Development Environments). Many IDEs are existing from many companies e.g. Microsoft Visual Interdev, JBuilder, Power Builder, Eclipse, JDeveloper, Microsoft Visual Studio, etc. The famous products of IBM are WebSphere Studio, Rational Application Developer, Rational Software Architect (RSA), etc. The IDEs are expected to work for C, C++, Java, J2EE, etc.

This paper relates to the design and development of an interactive IDE. I have tried to give my own approach for editing and have designed and developed my own IDE. The existing IDEs are language specific IDEs. But my IDE is general purpose IDE i.e. it does not restrict to any single language. This IDE shall be very useful to all the new comers in the Computer Science & Engineering discipline. In developing this IDE a total interactive approach is used. Thus the IDE shall prove to be a self learning and self guiding tool, without requiring any specific training.

#### VI. ACKNOWLEDGEMENT

The author is highly thankful to Hon'ble Shri Santosh Rungta, Respected Shri Sourabh Rungta, and Respected Shri Sonal Rungta of Rungta College of Engineering & Technology, Bhilai for providing the necessary facilities for the work.
